Application Requirements for a Water Well Placement Permit

You are applying for a Water Well placement Permit. The purpose of this permit is to prevent wells from being installed too close to septic systems. Septic systems must be at least one hundred feet (100') from all wells. This permit is also intended to limit, as much as possible, the influence a well has on neighboring property.

Please complete the attached application and return it, with the required fee, to the Health Department. Use a flag or stake to prominently mark the area you refer to have the well drilled. The health Department staff will visit your site to verify the location. Please comply with the following requests prior to our arrival.

1. We must have access to the well site. If there are locked gates that we will need to pass through, please make arrangements to have them open at the time of service.
2. If the site is over-grown, please clear the area near the proposed well site so that it will be easily identified.
3. Please restrain any dogs or other potentially hazardous livestock.

If you have not received your permit within 3 weeks, please contact the Health Department.
